JB-POWER COMPLETE MACHINE

# KAWASAKI ZEPHYR1100

After the legendary Z1, Kawasaki continuously evolved their four-cylinder engines in various models like Z1000R, GPZ1100F, eventually coming back to air cooling, from the water cooled Voyager, with the 1992's Zephyr 1100. The Zephyr 1100 sluggishness caused by the large, heavy body and dull engine, earned her the nickname "Cow", yet BITO R&D discovered this motorcycle's huge hidden potential. Installing ultra-light 18 inch MAGTAN wheels, JB-KYB  $\phi 41$  front fork, JB milled aluminum triple trees, JB six-pot radial calipers with 320mm cast iron floating discs and JB-KYB rear shocks, lowered the weight, raised the too low center of gravity and vastly improved the balance of stiffness, leading to a surprisingly light and neutral handling. In order to obtain engine performance adequate to such a motorcycle, BITO R&D increased the bore with JB-POWER 76mm forged pistons, installed a JB hand bend titanium exhaust system as well as 37mm FCR carburetors and performed our special JB-POWER port modification, creating an easy to drive, torquey engine with plenty of power across the whole rev range.
